

Features and Benefits include

Highest Quality Polypropylene Housing Available:

- We use only special solvent resistant, durable polypropylene that provides especially low extractable contaminants such as plasticizers.

Comprehension Design for Enhanced Performance SPE Applications:

- **Flange:** The new stream line design and reduced flange size allows for more columns to be processed on a manifold, while the flange design and size is still ideal for robotic application and easy handling.
- **Tip:** The tip design has been enhanced to eliminate spattering “cross-talk” greatly reducing the risk of contamination for reproducible and true results.
- **Unique channels:** The channels incorporated into the reservoir bottom allowing for improved laminar flow resulting in more efficient separations.

UCT's 25mL and 75mL standard syringe and 10ml “Z-tube” style reservoirs are all made with solvent resistant polypropylene housing with standard luer tips.

*Patent Pending
